

ABSTRACT OF THE DISCLOSURE

There is disclosed a method in which a recording section configured to record an external input signal, and a display signal output section configured to output a display signal based on at least one of the external input signal and a reproduction signal from the recording section are used. Here, when the display signal output section outputs the external input signal as the display signal, and a predetermined temporary interruption state is set at this time, the external input signal is recorded in the recording section.
